## General-purpose Basic Switch

Z

## Best-selling Basic Switch Boasting High Precision and Wide Variety

- A large switching capacity of 15 A with high repeat accuracy.
- A wide range of variations in contact form for your selection: basic, split-contact, maintained-contact, and adjustable contact gap types.
- A series of standard models for micro loads is available.
- A series of molded terminal-type models incorporating safety terminal protective cover is available.

## Model Number Structure

## Configuration

## Basic Models

## General-purpose

A variety of actuators is available for a wide range of application.
The contact mechanism of models for micro loads is a crossbar type with gold-alloy contacts, which ensures highly reliable operations for micro loads.
Contact Gap:
H: 0.25 mm (high-sensitivity, micro voltage current load)
G: 0.5 mm (standard)
E: 1.8 mm (high-capacity)
F: 1.0 mm (split-contact models)

## Split-contact Models

This type is identical in construction to the general-purpose basic switch except that it has two pairs of simultaneous acting contacts by splitting moving contacts.
Since the moving contacts are connected to a common terminal, either parallel or series connection is possible.

Highly reliable micro load switching is ensured if the model is used as a twin-contact switch.

## Maintained-contact Models

The maintained-contact type has a reset button at the bottom of the switch case, in addition to the pushbutton (plunger) located on the opposite side of the reset button. Use these buttons alternately.
Since the Switch has greater pretravel than overtravel, it is suitable for use in reversible control circuits, manual reset circuits, safety limit circuits, and other circuits which are not preferable for automatic resetting. (For further details, refer to individual datasheets.)

| Actuator |  | Standard | High-sensitivity | High-capacity | Micro load |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | G (0.5 mm) | H ( 0.25 mm ) | $\mathrm{E}(1.8 \mathrm{~mm})$ | H ( 0.25 mm ) |
| Hinge cross roller lever | Solder terminal | Z-15GW54 | --- | -- | --- |
|  | Screw terminal | Z-15GW54-B |  |  |  |
| Unidirectional short hinge roller lever | Solder terminal | Z-15GW2277 | --- | --- | --- |
|  | Screw terminal | Z-15GW2277-B |  |  |  |
| Reverse hinge lever (see note) | Solder terminal | Z-15GM | --- | --- | --- |
|  | Screw terminal | Z-15GM-B |  |  |  |
| Reverse short hinge roller lever (see note) | Solder terminal | Z-15GM22 | --- | --- | --- |
|  | Screw terminal | Z-15GM22-B |  |  |  |
| Reverse hinge roller lever (see note) | Solder terminal | Z-15GM2 | --- | --- | --- |
|  | Screw terminal | Z-15GM2-B |  |  |  |

Note: The pin plungers of reverse-type models are continuously pressed by the actuator levers with compression coil springs and the pin plungers are freed by operating the levers. Reverse-type models are highly vibration- and shock-resistive because the pin plungers are normally pressed.

## Minimum Order Lot

The following models are available at the minimum order lot specified below. Orders must be placed per lot.

| Actuator | Standard | High-sensitivity | Minimum order lot (pcs) |
| :---: | :---: | :---: | :---: |
|  | G (0.5 mm) | H (0.25 mm) |  |
| Short spring plunger | Z-15GD-B | --- | 10 |
| Panel mount plunger | $\begin{aligned} & \mathrm{Z}-15 \mathrm{GQ} \\ & \mathrm{Z}-15 \mathrm{GQ}-\mathrm{B} \\ & \mathrm{Z}-15 \mathrm{GQ} 8-\mathrm{B} \end{aligned}$ | --- |  |
| Panel mount roller plunger | $\begin{aligned} & \text { Z-15GQ22 } \\ & \text { Z-15GQ22-B } \end{aligned}$ | --- |  |
| Panel mount cross roller plunger | Z-15GQ21-B | --- |  |
| Short hinge lever | Z-15GW21-B | --- |  |
| Hinge lever | $\begin{aligned} & \text { Z-15GW } \\ & \text { Z-15GW-B } \end{aligned}$ | --- |  |
| Low-force hinge lever | Z-15GW4-B | Z-15HW24-B |  |
| Low-force hinge wire lever | --- | Z-15HW78-B |  |
| Short hinge roller lever | $\begin{array}{\|l\|} \hline \text { Z-15GW22 } \\ \text { Z-15GW22-B } \\ \hline \end{array}$ | --- |  |
| Hinge roller lever | $\begin{aligned} & \hline \text { Z-15GW2 } \\ & \text { Z-15GW2-B } \end{aligned}$ | --- |  |
| Reverse short hinge roller lever | Z-15GM22-B | --- |  |
| Reverse hinge roller lever | Z-15GM2-B | --- |  |

## Split-contact Models

| Actuator |  |  | F (1.0 mm) |
| :---: | :---: | :---: | :---: |
| Pin plunger - |  | Solder terminal | --- |
|  |  | Screw terminal | Z-10FY-B |
| Slim spring plunger 且 |  | Solder terminal | --- |
|  |  | Screw terminal | Z-10FSY-B |
| Short spring plunger |  | Solder terminal | --- |
|  |  | Screw terminal | Z-10FDY-B |
| Panel mount plunger | Medium OP | Solder terminal | --- |
|  |  | Screw terminal | Z-10FQY-B |
| Panel mount roller plunger |  | Solder terminal | --- |
|  |  | Screw terminal | Z-10FQ22Y-B |
| Hinge lever | Low OP | Solder terminal | --- |
|  |  | Screw terminal | Z-10FWY-B |
| Short hinge roller lever |  | Solder terminal | --- |
|  |  | Screw terminal | Z-10FW22Y-B |
| Hinge roller lever | Parallel | Solder terminal | --- |
|  |  | Screw terminal | Z-10FW2Y-B |
| Reverse short hinge roller lever |  | Solder terminal | --- |
|  |  | Screw terminal | Z-10FM22Y-B |

Note: The pin plungers of reverse-type models are continuously pressed by the actuator levers with compression coil springs and the pin plungers are freed by operating the levers. Reverse-type models are highly vibration- and shock-resistive because the pin plungers are normally pressed.

Maintained-contact Models

| Actuator | Maintained-contact model |

Note: 1. The above current ratings are the values of the steady-state current.
2. Inductive load has a power factor of 0.4 min . $(\mathrm{AC})$ and a time constant of 7 ms max. (DC).
3. Lamp load has an inrush current of 10 times the steady-state current.
4. Motor load has an inrush current of 6 times the steady-state current.
5. The normally closed and normally open ratings of reverse hinge lever models are opposite to each other.
6. The AC ratings of molded terminals are 125 and 250 V only.
7. The ratings values apply under the following test conditions:

Ambient temperature: $20 \pm 2^{\circ} \mathrm{C}$
Ambient humidity: $65 \pm 5 \%$
Operating frequency: 20 operations/min

Lead Wire Specifications

| Lead wire | Nominal crosssectional area ( $\mathrm{mm}^{2}$ ) | Finished outer diameter (mm) | Connection to terminal | Length (m) |
| :---: | :---: | :---: | :---: | :---: |
| VSF (single-core, vinyl cord) | 1.25 | Approx. 3.1 dia. | Black: COMWhite: NORed: NC | 0.5, 1, 2, 3 |
| VCT (vinyl-insulated cable) |  | Three-core: approx. 10.5 dia. |  |  |

Note: No models with molded terminals are approved by UL, CSA, or TÜV.

## Precautions

Refer to the Technical Information for Basic Switches (Cat. No. C122) for common precautions.

## Correct Use

## Mounting

Use M4 screws with plane washers and spring washers to mount the Switch. Tighten each mounting screw securely to a torque of 1.18 to $1.47 \mathrm{~N} \cdot \mathrm{~m}\{12$ to $15 \mathrm{kgf} \cdot \mathrm{cm}\}$.

## Basic Models (General-purpose) \& Split-contact Models

## Basic Models (Drip-proof) without Terminal Protective Cover

Two, 4.2 dia. mount

Panel Mount Plunger Panel Mount Roller Plunger

## Panel Mount Switch (Z-15 $\square$ Q $\square, \mathbf{Z - 0 1} \square \mathbf{Q} \square$ )

When mounting the panel mount plunger model with screws on a side surface, be careful of the dog angle and operation speed. Excessive dog angle or operation speed may damage the Switch.

The Switch can be panel mounted, provided that the hexagonal nut of the actuator is tightened to a torque of 2.94 to $4.9 \mathrm{~N} \cdot \mathrm{~m}\{30$ to $50 \mathrm{kgf} \cdot \mathrm{cm}$ \}.

When using the panel mount plunger model mounted with screws on a side surface, be careful not to apply a large shock. Applying a shock exceeding 100G may damage the Switch.
When using the panel mount plunger model mounted with screws on a side surface, remove the hexagonal nuts from the actuator.

## High-sensitivity Switch (Z-15H)

When using the Switch in a DC circuit, be sure to provide an arc suppressor as well because the small contact gap of the Switch may result in contact troubles.

In an application where a high repeat accuracy is required, limit the current that flows through the Switch to within 0.1 A . Also, use a relay to control a high-capacity load if the Switch is connected to such a load. (In this case, the exciting current of the relay coil is the load of the Switch.)
Do not apply a force of $19.6 \mathrm{~N}\{2 \mathrm{kgf}\}$ or higher to the pin plunger.
Exercise care that the environment conditions such as temperature and humidity do not change abruptly.

## Models with Drip-proof Terminal Cover (Z- $\square$ A55-B5V)

## Wiring

To attach the Protective Cover to the case, hold the cover in almost parallel to the case and then push it to the case. If the cover is pushed diagonally, the rubber packing may slip off, degrading the sealability of the Switch.

Use round solderless terminals having the following dimensions to connect leads to the terminals. Tighten the screws of terminals to a torque of 0.78 to $1.18 \mathrm{~N} \cdot \mathrm{~m}\{8$ to $12 \mathrm{kgf} \cdot \mathrm{cm}\}$.

Use the terminal shown below.

A cable 8.5 to 10.5 mm in diameter can be applicable to the sealing rubber of the lead outlet of the Switch. A two-core or three-core VCT cable having a cross-sectional area of $1.25 \mathrm{~mm}^{2}$ is especially suitable for this.

Use M4 small screws with spring toothed washer are used as the terminal screws.

## Drip-proof Switch (Z $\square 55$ )

The Switch is not perfectly oil-tight; so do not dip it in oil or water.
The rubber boots are made from weather-resistive chloroprene rubber.

Do not use Basic Switches in places with radical changes in temperature.

## Split-contact Switch (Z-10F $\square$ Y)

The applicable current varies depending on how the contacts are used. If the Switch is connected in series, the Switch can endure a current 1.5 to 2 times higher than the current that can be applied in parallel connection.

## Flexible Rod Switch (Z-15 $\square$ NJ $\square 55$, Dripproof)

When the rod is fully swung, the Switch may operate when the lever returns, causing chattering. Use a circuit that compensates for chattering wherever possible.
Do not switch the rod to the fullest extent when the Switch is to break a power circuit because such a practice may cause metal deposition to occur between the mating contacts of the Switch.

## Micro Load Applicable Range

Using a model for ordinary loads to open or close the contact of a micro load circuit may result in faulty contact. Use models that operate in the following range. However, even when using micro load models within the operating range shown here, if inrush current occurs when the contact is opened or closed, it may increase contact wear and so decrease life expectancy. Therefore, insert a contact protection circuit where necessary.
The minimum applicable load is the N -level reference value. This value indicates the malfunction reference level for the reliability level of $60 \%$ ( $\lambda 60$ ). The equation, $\lambda 60=0.5 \times 10^{-6} /$ operations indicates that the estimated malfunction rate is less than $1 / 2,000,000$ operations with a reliability level of $60 \%$.

| Item | Z-01H | Z-15 $\square, \mathbf{Z - 1 0 F Y}$ |
| :--- | :--- | :---: |
| Minimum applicable <br> load | 1 mA at 5 VDC | 160 mA at 5 VDC |

## Others

Do not apply an excessive force to the mounting bracket with a screwdriver or a similar object when attaching or detaching the protective cover; otherwise, the cover will be deformed.

This terminal protective cover cannot be used with models whose model number does not have the prefix "-B5V."
Terminal protective covers can be ordered separately for maintenance use.

## Accessories (Order Separately)

Refer to $Z / A / X / D Z$ Common Accessories for details about Terminal Covers, Separators, and Actuators.
